

Project Name: Westerly High School

Project Location: Westerly, RI

Project Overview

NEIS delivered the laboratory casework package and installed the architectural millwork in conjunction with their sister company Artisan Millwork. The project took a higher education approach by innovating the high school's science labs for the 21st century. This high school lab will help prepare students for continued education and careers that are in high demand. The maple wood pier stations with locking cabinets surround the classroom and provide plenty of workspace along with overhead carriers that administer necessary resources to perform their experiments. Painted metal locking wall cabinets with shelving offers durable and easy to clean overhead storage.

- CiF Premium Maple Wood Casework
- CiF Painted Metal Casework
- Flexible Lab Tables
- Overhead Service Carriers
- Custom Millwork Solutions by Artisan Millwork

Project Statistics

- Project Size: 250,000 square feet
- NEIS Contract: \$1.05 million

Project Participants

- Architect: Ai3 Architects
- Construction Manager: Gilbane Building Company
